Student Number:

- This examination has **3** questions. There are a total of **6 pages, DOUBLE-SIDED**.
- All statements in predicate logic must have negations applied directly to propositional variables or predicates.
- In your proofs, you may always use definitions we have covered in this course. However, you may **not** use any external facts about these definitions unless they are given in the question.
- For algorithm analysis questions, you can jump immediately from an exact step count to an asymptotic bound without proof (e.g., write “the number of steps is $3n + \lceil \log n \rceil$, which is $\Theta(n)$ ”).
